InGaN wavelength is very sensitive to drive current. Operating at lower current is not recommended and may yield unpredictable performance.  
 Current pulsing should be used for dimming purposes.

### 4) Typical Values:

- 4.1 At special conditions of LED manufacturing processes, typical data or calculated correlations of technical parameters only reflect the statistical figures. But not necessarily correspond to the actual parameters of each single product, which could differ from the typical data or calculated correlations or the typical characteristic line. These typical data may change whenever technical improvements happen.

### 5) Tolerance of Measure
